

Fluid Level Alert for Safety and Control

We are delighted to announce a new Water Level Warning System based on our Precision Level Transmitters. **Lev-Alert** was developed at the request of one of our existing customers and has already proven to be fully justified in both industrial or office environments. It can also be configured for pressure, RH or temperature related installations.

The PMC Lev-ALERT can provide visual or audio warnings when the fluid/water/sewage reach dangerous levels. It also provides switch outputs to control appropriate output pumps or input valves.

- Fully configurable to customer needs.
- Single warning light, or multiple stack lights
- Displays and annunciates Level, Temperature, Dew Point, RH, or any combination based on the separate sensors selected (I.E. YELLOW light at 25ft and RED light at 30ft).
- Customer programmable set points
- NEMA 4 Enclosure
- Sunlight Readable Display
- Multi-Pump Alternation Control
- 2 or 4 switch output for control
- Separate 4-20mA output for remote display
- Universal power: 85-265 Vac and 12/24 Vdc
- Math Functions for Round Horizontal Tanks
- See separate VL series Datasheets for appropriate level transmitters
